

AVIATION TOOL SETS

KMC18AVTK

Snap-on

Foreign Object Debris costs the aerospace industry millions of dollars each year in damage to equipment and personnel. Tool control systems control tool shrinkage and replacement cost. They also help reduce lost-tool downtime. In critical industries and applications such as aviation, tool control is an essential step toward eliminating FOD (Foreign Object Damage).

KMC18AVTK Aircraft Maintenance Kit with Portable Chest

- Use to work on nearly any aircraft system
- Easy to carry and stow
- Case is chemical resistant, dust proof, water tight, and has a pressure equalization valve
- Ideal for flightline maintenance

AS-954 HAND TOOLS

Commitment to Quality & Standards

Snap-on is committed to meeting ANSI and global product standards, and often goes beyond them. Whether it's Snap-on® products or partner products, every tool we sell goes through rigorous testing for performance, quality, ergonomics, durability and safety. Done at our own corporate test facility in Kenosha, we pledge to meet or exceed the highest standards in the industry.

At Snap-on, we:

- Are active participants in the creation of ANSI and other industry standards
- Hold regular meetings with government and industry bodies to review and update current and developing technologies
- Offer unique and proprietary products designed to go beyond the scope of ANSI and other standards

Over 300 Hand Tools That Conform to Aerospace Standards

According to Aerospace Standard AS-954, wrenches shall not touch the upper 5% of the fastener's corners. The design of a box wrench or socket wrench profile shall be configured so that, when mated with 12-point fasteners conforming to the AS-870 requirements, they shall transmit torque to the fastener without bearing on the outer 5% of the fastener's wrenching points.

Snap-on® 12-point wrenches and sockets with the Flank Drive® Wrenching System comply with this requirement by achieving maximum engagement (flat-to-flat contact) along the flank of the fastener, while keeping contact away from the fastener's corners.

The Flank Drive® Wrenching System configuration has radiused corners, allowing use of thinner socket walls because of reduced stress concentrations. Thinner socket walls can often allow clearance to fasteners that conventional sockets can't reach. In addition, the Flank Drive® Wrenching System can deliver up to 20% more turning power.

The Snap-on® Flank Drive® Advantage

Conventional 12-point wrench and the contact it makes on the corner of a nut or bolt. The corner can round off under high loads causing the wrench to slip.

A Snap-on® Flank Drive® wrench moves the contact away from the corners with a radius, then provides flat-to-flat contact for up to 20% more turning power.
